

# Fixes & Improvements - v2.0.1

---

**Date:** November 22, 2025

## Bug Fixes

---

### 1. Cart Counter Update Issue ✓

**Problem:** Cart counter in header didn't always update immediately after adding items to cart.

**Solution:**

- Implemented real-time event system using `window.dispatchEvent('cartUpdated')`
- Header now listens for cart update events and refreshes count immediately
- Events triggered from:
  - `SOPCard` component (when adding to cart)
  - `CartClient` component (when removing items or clearing cart)

**Files Modified:**

- `/components/header.tsx` - Added event listener
  - `/components/sop-card.tsx` - Dispatch event after add
  - `/app/cart/cart-client.tsx` - Dispatch events after remove/clear
- 

### 2. Session Deletion Feature ✓

**Problem:** No way to delete completed or incomplete sessions from dashboard.

**Solution:**

- Added DELETE endpoint at `/api/sessions/[id]`
- Added delete button with trash icon in dashboard sessions list
- Confirmation dialog before deletion
- Toast notification on success/error
- Automatically refreshes page after deletion

**Files Modified:**

- `/app/api/sessions/[id]/route.ts` - Added DELETE handler
- `/app/dashboard/dashboard-client.tsx` - Added UI button and handler function

**Features:**

- Works for both completed and in-progress sessions
  - Authorization check (only owner can delete)
  - Cascade delete of session steps
- 

### 3. Russian Text Removed ✓

**Problem:** Purchase button displayed "Купить SOP" (Russian) instead of English.

**Solution:**

- Changed all Russian text to English
- Button now shows "Purchase SOP"

**Files Modified:**

- `/app/sops/[id]/sop-detail-client.tsx` - Changed button text from "Купить SOP" to "Purchase SOP"

## Technical Details

### Event System Architecture

```
// Trigger event (from any component)
window.dispatchEvent(new Event('cartUpdated'));

// Listen for event (in Header)
useEffect(() => {
  const handleCartUpdate = () => {
    fetchCartCount();
  };
  window.addEventListener('cartUpdated', handleCartUpdate);
  return () => window.removeEventListener('cartUpdated', handleCartUpdate);
}, [status]);
```

### Session Delete API

```
// DELETE /api/sessions/[id]
Response: {
  success: true,
  message: "Session deleted successfully"
}

Errors:
- 404: Session not found
- 403: Not authorized (not owner)
- 500: Server error
```

## Testing Status

All fixes tested and verified:

- TypeScript compilation: 0 errors
- Build successful
- Dev server running
- All API endpoints working
- Cart counter updates instantly
- Session deletion works
- No Russian text remaining

## Deployment Notes

---

No database migration required. All changes are backward compatible.

Deploy-ready! ✨

---

**Version:** 2.0.1

**Status:** Production Ready

**Developer:** DeepAgent AI

---

### 4. Button Text Updated ✓

**Problem:** Purchase button text changed to “Buy SOP” for better clarity.

**Solution:**

- Changed button text from “Purchase SOP” to “Buy SOP”
- More concise and clear call-to-action

**Files Modified:**

- `/app/sops/[id]/sop-detail-client.tsx` - Changed button text
- 

**Version:** 2.0.1 (Updated)

**Date:** November 22, 2025

**Status:** Production Ready

---

### 5. Buy SOP Button Fixed - Now Adds to Cart ✓

**Problem:** The “Buy SOP” button on paid SOP detail pages was not clickable and did not add items to the cart. It was directly redirecting to Stripe checkout instead.

**Solution:**

- Changed button behavior to add SOP to cart (POST `/api/cart`)
- Added success toast notification “Added to cart!”
- Dispatches `cartUpdated` event for real-time header update
- Automatically redirects to cart page after adding
- Consistent with “Add to Cart” functionality elsewhere

**User Experience Flow:**

1. User clicks “Buy SOP” on locked SOP page
2. SOP is added to cart
3. Success notification appears
4. User is redirected to cart page
5. User can review cart and proceed to checkout

**Files Modified:**

- `/app/sops/[id]/sop-detail-client.tsx` - Updated button onClick handler (lines 171-205)

**Technical Changes:**

- Changed from: `/api/checkout/create-session` (direct Stripe)
  - Changed to: `/api/cart` (add to cart first)
  - Added: `window.dispatchEvent(new Event('cartUpdated'))`
  - Added: `router.push("/cart")`
- 

**Version:** 2.0.1 (Updated)

**Date:** November 25, 2025

**Status:** Production Ready
